b) Amendments to the Specification:

On page 11, after line 25, please add the following two paragraphs:

The term "ring-like shaped cavity" as used herein refers to any type of ring-like shaped cavities, which allows to create a ring vortex flow without substantial decreasing of effect of the invention that is high output of low-molecular olefins through suppressing secondary reactions by instant heating hydrocarbons feed to pyrolysis temperature.

Or The ring-like shaped cavity may be presented in the form of any toroidal or toroid-like cavity. One example of a toroid-like cavity is shown in Fig. 3. It can be seen that the toroid-like cavity has two semicavities, each communicating with the other. If desired, the toroid-like cavity may have a number of such partial cavities, the envelope line of the toroid-like cavity approaching to ideal toroidal shape.
